

Compatible authoring systems : Docyrus

Build and generate your PDF, HTML,
Open Office, Scorm,... from your
different documents **online!**

Summary:

1. What is Docyrus?
2. Explanation of the study case
3. Demonstration of the study Case by Nicolas Leblanc.

Summary:

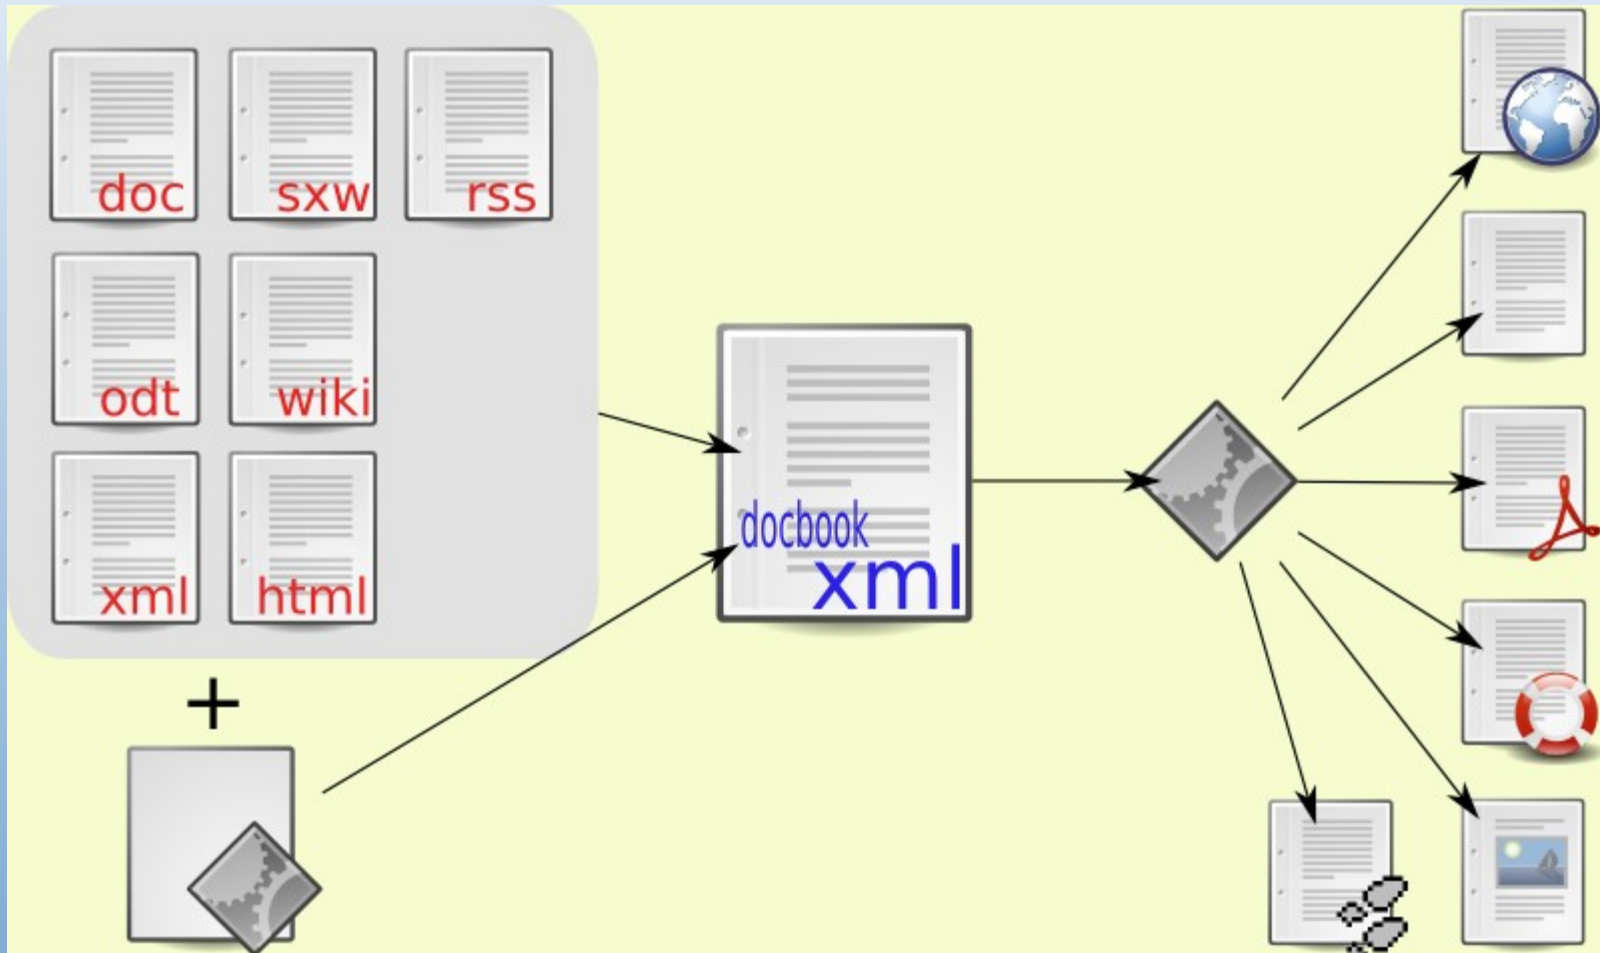

- 1. What is Docyrus?**
2. Explanation of the study case
3. Demonstration of the study Case by Nicolas Leblanc.

Main goals

Docyrus is a web application allowing to:

- create an article from chapters or articles imported.
- Generate your article in many different formats

System overview

Main features (1)

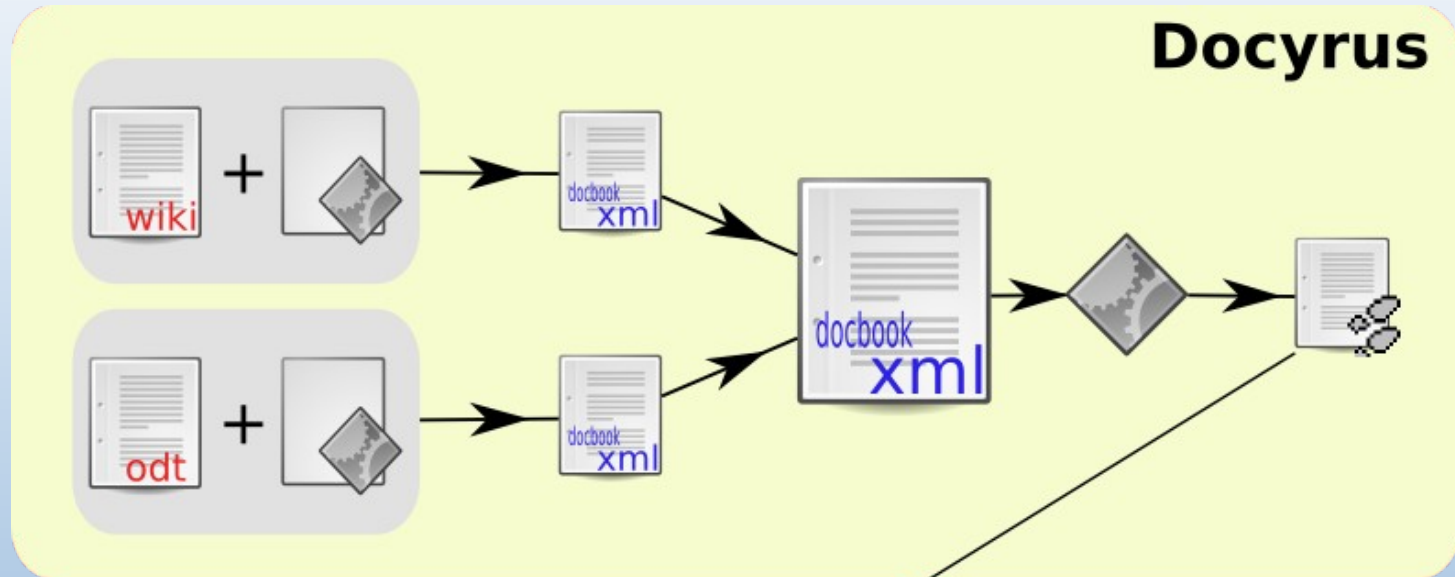

- Importation
 - Import an article in docbook, Word, Open Office, HTML, RSS, wiki (from a file or a website).
 - Create stylesheets to convert imported documents into docbook xml
- Library
 - Sort your documents in categories and sub-categories
 - Edit your categories
 - Syntactic research and / or Metadata research
- Bookmark
 - Bookmark favourite chapters and articles

Main features (2)

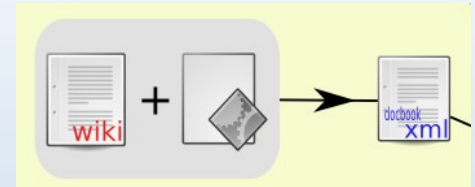

- Your document
 - Add chapters, articles in your document
 - Create, delete chapters
 - Change the order of the chapters
 - Move chapters into an other.
- Exportation
 - generate file from your bookmarks and/or your document. Many formats are supported like xml, html, pdf, Open Office, Html-help, Scorm, ...
 - Download the generated file
- User management

Summary:

▼3. How to change the properties of a Wiki ?

Click on the icon in the 'Properties' column in the Wiki list to go to the Wiki properties form.

▼4. How to use the Access control management options ?

You can set the access rights for users by checking/unchecking the box in the 'Access control management' section of Wiki properties. You can grant/ungrant access to three types of users :

- Course members : users enroll to the course (except the course managers)
- Group members (only available within a group) : users which are members of the group (except the group's tutors)
- Other users : anonymous users or users which are not course members

Claroline : document and links tool

What is the document tool?

This tool provides a comprehensive mechanism for organizing files and links that a teacher would like to make available to the students. It is possible to make many directories, and to have directories within directories to enable grouping of files.

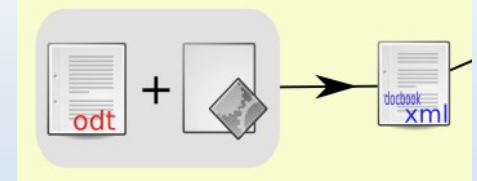

It is possible to

- Delete
- Move
- Rename
- Add a comment
- Stop students seeing files
- Add web links
- Create HTML page

Open Office to Xml (1)

Open Office to Xml (2)

The screenshot shows the OpenOffice Writer interface. The title bar indicates the document is titled 'Claroline : document and links tool'. The main text area contains the following content:

Claroline : document and links tool

It is possible to

- Delete
- Move
- Rename
- Add a comment

The right sidebar shows the 'Styles and Formatting' panel, which lists various styles such as 'Complimentary close', 'Default', 'First line indent', 'Hanging indent', 'Heading 1' through 'Heading 10', 'List Indent', 'Marginalia', 'Signature', 'Text body', and 'Text body indent'. The 'Text Styles' dropdown is currently set to 'Text body'.
