

A user-friendly platform

Claroline is easy to install, and the daily platform management doesn't require **any specific technical skill**. The course manager can appropriate the tool within a short period of time and focus on the quality of the developed pedagogies.

The main concern of Claroline developers is not to build up a large number of features, but to concentrate upon **a few elaborated tools** concerning the pedagogical approach and the interface offered to users.

A pedagogical platform

Claroline has been developed **following teachers' pedagogical experience and needs**. It supports course managers in their projects and stimulates them to set up efficient resources promoting the acquisition of knowledge and skills.

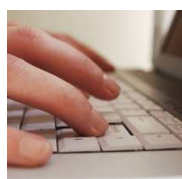

Seduced by the simplicity of the classical tools (uploading documents, publishing announcements), the course manager will quickly try out more elaborated tools (group management, assignments support...) in order to **progress at his own pace** on the pedagogical innovation path.

A living platform

Released under Open Source licence, Claroline already seduced a large number of **users and developers around the world**, who contribute to its development extensively. Experience and achievements of one user can meet the needs of another one.

Listening carefully to this active community, the Claroline development teams improve the platform in line with the needs of various learning environments.

An effective platform

Downloading and using Claroline is completely **free of charge** and can be done with any web browser.

The platform is customizable and offers the course manager **a flexible and custom-made working environment**. It involves the student in his training, giving him more autonomy in the organisation of his learning activities.
